7						<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8						<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9						<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
10						<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Optional requests (no additional fee):

I want the indexes to be pre-calibrated on my wind farm(s) – improved correlation level and accuracy of indexes

The pre-calibration consists in adjusting the amplitude of variation of the index in order to take into account the actual wind farm specificities. For this optional request, the following elements are required:

- A sample of monthly production data (1 to 3 years) and if possible, the corresponding availability rates (.xls, .csv or .txt format),
- The characteristic of the wind farm (name of the wind farm, total power, turbine mode)

The pre-calibration will be made only if Eoltech considers the data provided, relevant for this purpose (no warranty). Data will be treated as confidential.

Please fill in this order form and send it back to irecindex@eoltech.fr.

Upon reception of the completed form, a confirmation email will be sent with an attached invoice.
